

KTM EXC (2004-2007) Installation guide

Fig 1

fig 2

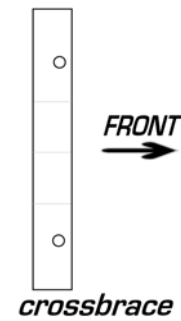

fig3

Fig 4

fig 5

- Remove lower section of rear fender
- Using care not to damage the threads, drill 1/8" pilot hole up through subframe and rear fender (fig1)
- Remove fender, enlarge pilot hole in upper subframe with 1/4" drill, do not drill out threads- take care not to damage threads in subframe.
- Enlarge holes in fender to 5/8"
- Install upper section of rear fender, insert enclosed 5/8" spacers in fender holes (fig.2)
- Install cross brace (bolt holes closer to front of bike) using enclosed M6 X 50mm button head bolt (fig 3)
- Re-install lower fender section using original stepped washer with enclosed 6mm nuts (fig 4)
- Install side brackets as shown in fig 5 – replace subframe bolts with enclosed flat head bolts at forward mounting points if necessary.

Bag Mounting

- Bag is slid forward over the rear mounting loop
- Forward strap is attached to forward mounting loop and tightened
- Adjust straps over seat/fender to remove any slack
